SUMMARY

Aspiring SOC Analyst and DFIR practitioner with hands-on experience in threat detection, network security, ICS/OT analysis, bug bounty research, and CTFs. Passionate about applying an attacker's perspective to strengthen defensive security.

TECHNICAL SKILLS

Languages: C, Python, Java, Bash

Network & Security: Wireshark, Nmap, Burp Suite, Metasploit, Ghidra, YARA

Incident Response & Detection: Wazuh SIEM, threat-hunting automation, CyberChef

Platforms & Infrastructure: Linux, Docker, Git, VirtualBox, VS Code

EXPERIENCE

Bug Bounty Researcher - Bugcrowd

May 27, 2026 - Present

- Identified security vulnerabilities and responsibly report findings through Bug Bounty and Vulnerability Disclosure Programs (VDPs).
- Conducted reconnaissance, manual testing, and vulnerability validation using industry-standard security tools.
- Documented and responsibly submitted potential security findings following coordinated disclosure practices.

Summer Intern @ Wimera Systems (Onsite) - Bangalore, Karnataka

May 4, 2026 - June 26, 2026

- Implemented and tested Modbus RTU and TCP/IP communication between industrial devices and software systems.
- Developed 2+ C# (.NET)-based tools for protocol validation, device communication testing, and troubleshooting.
- Performed 50+ protocol analysis and system-level debugging to identify and resolve communication failures.
- Implemented multi-register read functionality (Modbus FC03/FC04) supporting 32+ concurrent device connections with <200ms latency.
- Gained hands-on experience with ICS/OT environments, industrial protocols, network communications, and secure system integration.

Machine Learning Intern @ SaiKet Systems (Remote) - Bangalore, Karnataka

Jan 25, 2026 - Feb, 25 2026

- Applied machine learning techniques for classification and anomaly detection in security-related datasets.
- Performed data preprocessing and model optimization using Python.
- Documented workflows and experimental results for reproducibility.

Offensive Cyber Security Intern @ InLighnX Global Pvt. Ltd. (Remote) - Bangalore, Karnataka

Oct 5, 2025 - Dec 5, 2025

- Completed structured cybersecurity training focusing on offensive and defensive security methodologies.
- Developed Python-based security automation tools for authentication testing, file protection, and security workflow automation.
- Gained hands-on experience with hashing algorithms (MD5, SHA), password cracking techniques, and secure coding practices.
- Performed vulnerability assessment exercises and applied penetration testing concepts in supervised scenarios.

PROJECTS

AI SOC Lab — Autonomous Detection & Response Platform

May 2026 - June 2026

- Engineered Wazuh + Ollama + Python pipeline detecting 15+ simulated attack scenarios with 92% alert accuracy and <5min MTTR.
- Automated YARA rule generation & threat-hunting workflows; reduced manual log analysis time by 60% (50 hrs → 20 hrs per 1M events).
- Deployed containerized lab infrastructure (Docker, Linux) supporting real-world EDR simulation; validated detection rules against Mitre ATT&CK TTP mappings.

Phishing Simulation Research Tool

Jan 2026 - April 2026

- Built a phishing simulation toolkit for controlled cybersecurity demonstrations and security awareness testing.
- Developed tunnel-based hosting workflows and customizable web templates using Bash, PHP, and HTML.
- Analyzed browser permission handling and client-side attack surfaces in isolated lab environments.
- Focused on ethical security research, social-engineering simulations, and penetration-testing concepts.

Reverse Engineering AI Assistant

Dec 2025 - Feb 2026

- Developed Linux-based tools for static analysis of Android applications.
- Built Python utilities for APK extraction, inspection, and vulnerability analysis.
- Focused on improving efficiency of reverse engineering and security auditing workflows.
- Analyzed application behavior and identified potential security vulnerabilities during static analysis.

ACHIEVEMENTS & RECOGNITION

- Certified on — Android Bug Bounty Hunting (EC-Council), BASH Training (IIT Bombay).
- Bug Bounty Research: Submitted findings on HackerOne, Bugcrowd and on many other Bug Bounty Programmes.
- Active CTF Competitor. Completed 10+ HackTheBox machines. Top 20% on TryHackMe.
- Published Security Research: vishwakumarv.github.io/writeups Technical CTF writeups and OSINT analysis.

EDUCATION

PSG College of Technology, Coimbatore

Aug 2023 - May 2027

Bachelor of Engineering in Electronics and Communication Engineering

Languages: Tamil (Native), English (Professional Working), Hindi (Professional Working), Kannada (Limited Working)
