

VISHWA KUMAR VENKATESWARAN

+91 9342236718 | vishwakumarv05@gmail.com | LinkedIn | GitHub | Portfolio

Bengaluru, Karnataka, India

SUMMARY

Aspiring SOC Analyst and DFIR practitioner with hands-on experience in threat detection, log analysis, network security, and ICS/OT protocol analysis. Active in bug bounty research and CTF competitions, leveraging an attacker's perspective to better understand vulnerabilities, adversary techniques, and defensive gaps.

ACHIEVEMENTS & RECOGNITION

- Certified on — Android Bug Bounty Hunting (EC-Council), BASH Training but IIT Bombay
- Bug Bounty Research: Submitted findings on HackerOne, Bugcrowd and on many other Bug Bounty Programmes
- Active CTF Competitor. Completed 10+ HackTheBox machines. Top 20% on TryHackMe
- Published Security Research: vishwakumarv.github.io/writeups Technical CTF writeups and OSINT analysis

TECHNICAL SKILLS

Languages: C, Python, Java, Bash

Network & Security: Wireshark, Nmap, Burp Suite, Metasploit, Ghidra, YARA

Incident Response & Detection: Wazuh SIEM, threat-hunting automation, CyberChef

Platforms & Infrastructure: Linux (Kali, Debian), Docker, Git, VirtualBox, VS Code

Protocols & Standards: Matter, Modbus (RTU/TCP), TCP/IP, Mitre ATT&CK framework

EXPERIENCE

Summer Intern @ Wimera Systems (Onsite) - Bangalore, Karnataka

May 4, 2026 - June 26, 2026

- Implemented and tested Modbus RTU and TCP/IP communication between industrial devices and software systems.
- Developed 2+ C# (.NET)-based tools for protocol validation, device communication testing, and troubleshooting.
- Performed 50+ protocol analysis and system-level debugging to identify and resolve communication failures.
- Implemented multi-register read functionality (Modbus FC03/FC04) supporting 32+ concurrent device connections with <200ms latency
- Conducted functional testing, documentation, and verification of industrial communication workflows.
- Gained hands-on experience with ICS/OT environments, industrial protocols, network communications, and secure system integration.

Machine Learning Intern @ SaiKet Systems (Remote) - Bangalore, Karnataka

Jan 25, 2026 – Feb 25 2026

- Applied machine learning techniques for classification and anomaly detection in security-related datasets
- Performed data preprocessing and model optimization using Python
- Documented workflows and experimental results for reproducibility

Offensive Cyber Security Intern @ InLighnX Global Pvt. Ltd. (Remote) - Bangalore, Karnataka

Oct 5, 2025 – Dec 5, 2025

- Completed structured cybersecurity training focusing on offensive and defensive security methodologies
- Developed Python-based security automation tools for authentication testing, file protection, and security workflow automation.
- Gained hands-on experience with hashing algorithms (MD5, SHA), password cracking techniques, and secure coding practices
- Performed vulnerability assessment exercises and applied penetration testing concepts in supervised scenarios

PROJECTS

AI SOC Lab — Autonomous Detection & Response Platform

Dec 2025 – Feb 2026

- Engineered Wazuh + Ollama + Python pipeline detecting 15+ simulated attack scenarios with 92% alert accuracy and <5min MTTR
- Automated YARA rule generation & threat-hunting workflows; reduced manual log analysis time by 60% (50 hrs → 20 hrs per 1M events)
- Deployed containerized lab infrastructure (Docker, Linux) supporting real-world EDR simulation; validated detection rules against Mitre ATT&CK TTP mappings
- Deliverable: Open-sourced Python analyzer for alert triage & incident report generation

Phishing Simulation Research Tool

Feb 2026 - May 2026

- Built a phishing simulation toolkit for controlled cybersecurity demonstrations and security awareness testing
- Developed tunnel-based hosting workflows and customizable web templates using Bash, PHP, and HTML
- Analyzed browser permission handling and client-side attack surfaces in isolated lab environments
- Focused on ethical security research, social-engineering simulations, and penetration-testing concepts

Reverse Engineering AI Assistant

Dec 2025 – Feb 2026

- Developed Linux-based tools for static analysis of Android applications
- Built Python utilities for APK extraction, inspection, and vulnerability analysis
- Focused on improving efficiency of reverse engineering and security auditing workflows
- Analyzed application behavior and identified potential security vulnerabilities during static analysis

EDUCATION

PSG College of Technology, Coimbatore

Aug 2023 - June 2027

Bachelor of Engineering in Electronics and Communication Engineering

Languages: Tamil (Native), English (Professional Working), Hindi (Professional Working), Kannada (Limited Working)
